AQUA SICURA

Dubai | Adu Dhabi | Middle East

Mazaya Business Avenue - Tower AA1 - Office 4001-4003 | First Al Khalil St - Jumeirah Lake Towers - Dubai

IN EVERY SIP, DIP OR SPLASH - AQUA SICURA IS YOUR TRUSTED WATER PARTNER

Think of a water use, and you'll find an Aqua Sicura technology expertly engineered to enhance your safety and experience. Our comprehensive suite of systems supports the following use cases.

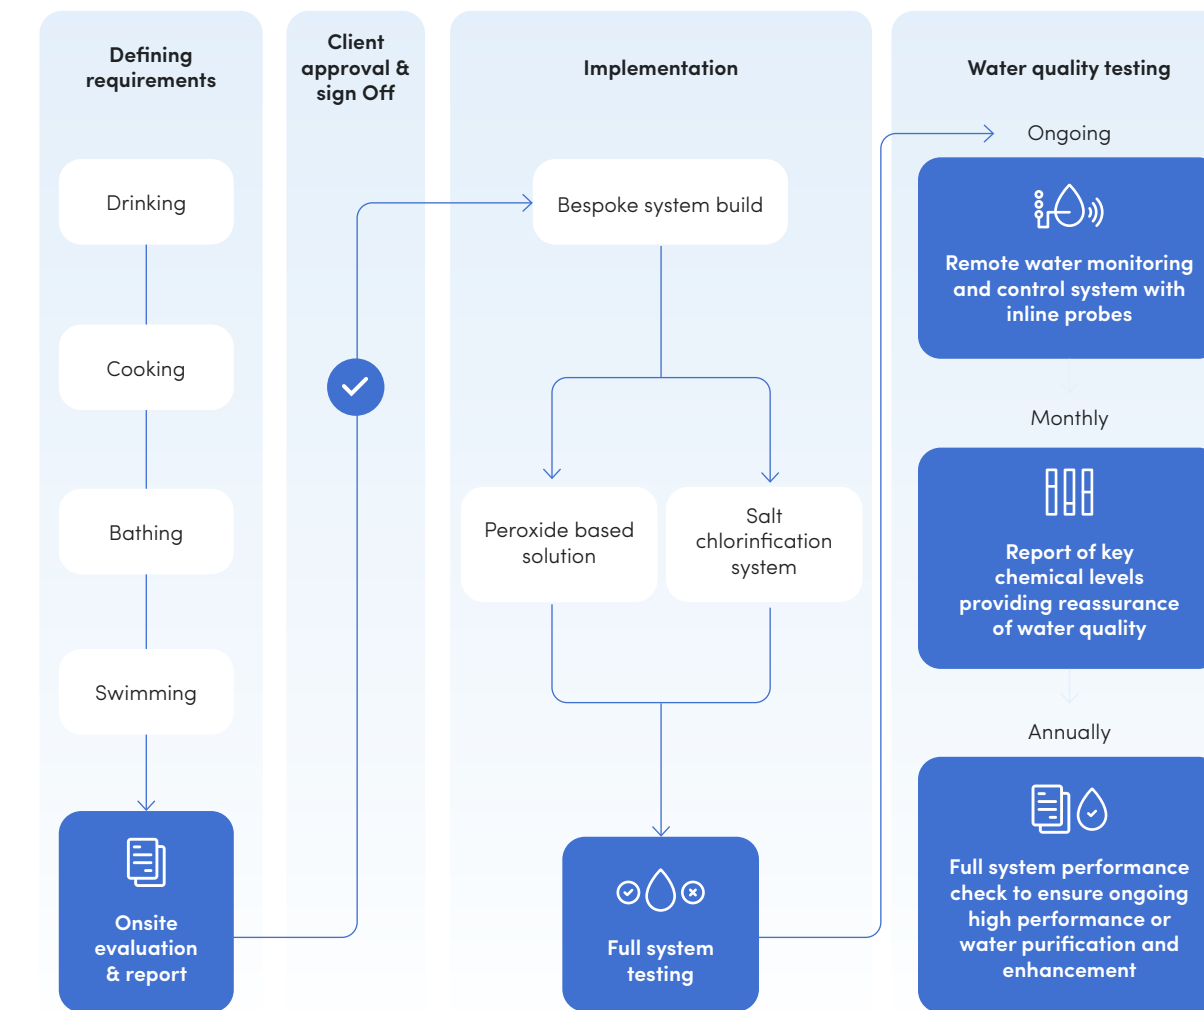

Use case	Applications	Aqua Sicura solution & benefit
Sip	Drinking Water & Cooking	Removes contaminants, microplastics, and harmful substances like arsenic. Improves food texture and taste by treating hard water minerals.
Splash	Showers, Bathrooms & Appliances	Prevents unsightly limescale deposits in kitchens and bathrooms. Uses an 'activation' process to soften water, protecting pipes and improving energy efficiency. Prevents reduced shower flow and damage to washing machines and dishwashers. Minimises hair loss by removing chlorine.
Dip	Swimming & Leisure Pools	Offers chlorine-free solutions using hydrogen peroxide for water that is soft and pleasant to swim in. Provides saltwater chlorination that is gentler on the skin and eyes. Enhances the bathing experience with natural minerals for therapeutic effects.

A STREAM OF SUCCESSFUL PROJECTS ACROSS THE MENA REGION

Aqua Sicura's team of expert technicians has successfully delivered thousands of water filtration systems across hundreds of projects throughout the MENA region. Our engineers work discreetly with the aim of minimising disruption to your everyday life, while taking great care of your property.

" Our systems work quietly and effectively out of sight to maintain quality and prevent contamination across all your water needs - we want you to take clean water for granted. "

WHERE CLEAN WATER FLOWS NATURALLY

Some things in life are non-negotiable. Clean water is one of them. Whether it's for drinking, showering or swimming, Aqua Sicura exists to ensure the purity and hygiene of all your water sources.

AQUA SICURA

TAKE CLEAN WATER FOR GRANTED WITH AQUA SICURA

Water - the basis of life on Earth. Traditionally seen as an element, technically a chemical compound. But no matter how you look at this precious resource, one thing rings true: for human flourishing, water must be clean.

This is our mission at Aqua Sicura. We take care of all your water purification and filtration needs with our comprehensive range of highly reliable, low-maintenance systems for everything from the kitchen sink to your leisure pool.

Get on with life, safe in the knowledge that an Aqua Sicura device is working seamlessly in the background to protect you and your loved ones from the risk of water contamination.

YOUR PARTNER FOR ADVANCED HOME WATER TREATMENT

Water in your home needs to be of the best possible quality. This is precisely what our complete, advanced water treatment system delivers. It is a low-maintenance design built around a multi-stage process, where each component is engineered to remove contaminants and constantly monitor water quality.

Depending on the characteristics of your home, Aqua Sicura's professional engineers will advise on a tailored water

treatment solution that is both durable and efficient, delivering the highest standards in water quality. But our support for you doesn't stop there. Aqua Sicura solutions monitor key parameters in real time, immediately flagging any potential issues, while regular maintenance ensures your system is always performing optimally. As an added safety measure, we take monthly samples for certification by an accredited laboratory.

QUALITY IN EVERY DROP - ENJOY WATER FREE FROM CONTAMINATION AND MICROPLASTICS

Bottled water sales are booming, driven by convenience and a lack of trust in tap water. But this trend is having a huge impact on the planet - and potentially our health.

It's estimated that eight million pieces of plastic enter the oceans each day. Worse still, research has shown that 80 percent of bottled water contains microplastics and other contaminants, which have been linked to cancer and fertility problems among other ailments.

Additionally, water used in cooking can present problems too. Hard water

can contain minerals like calcium and magnesium, affecting food texture and taste, while unfiltered water can leave us exposed to harmful substances such as arsenic.

Thankfully, these threats can easily be prevented with effective filtration systems, such as carbon filters and reverse osmosis. However, only Aqua Sicura's multi-stage pure water technology is engineered to remove all harmful elements that might be found in plastic bottles and unfiltered systems.

ATTENDING TO THE DANGERS OF STAGNANT WATER

Incorporating an electronic descaler into your home water solution will modify the crystalline structure of calcium deposits, preventing them from attaching themselves to pipe surfaces. This in turn eliminates the biofilm layer that can potentially become hazardous when water remains stagnant.

The solution is activation.

This process softens hard water, making it gentler while preventing limescale from sticking to pipes. It not only protects systems but also improves their energy efficiency.

Common activation methods include magnetic and electronic treatments, which turn calcium carbonate into aragonite, a crystalline form of calcium carbonate.

This is less prone to sticking to surfaces and remains suspended in water - thus avoiding bacteria formation.

SWIMMING POOL MAINTENANCE MADE EASY

Whether your pool is a haven of relaxation and fun or an important part of a physical fitness routine, poor water maintenance can significantly diminish your swimming experience, not to mention pose a threat to your health. Clean water is paramount.

Chlorine-free - the sweetest water you'll swim in

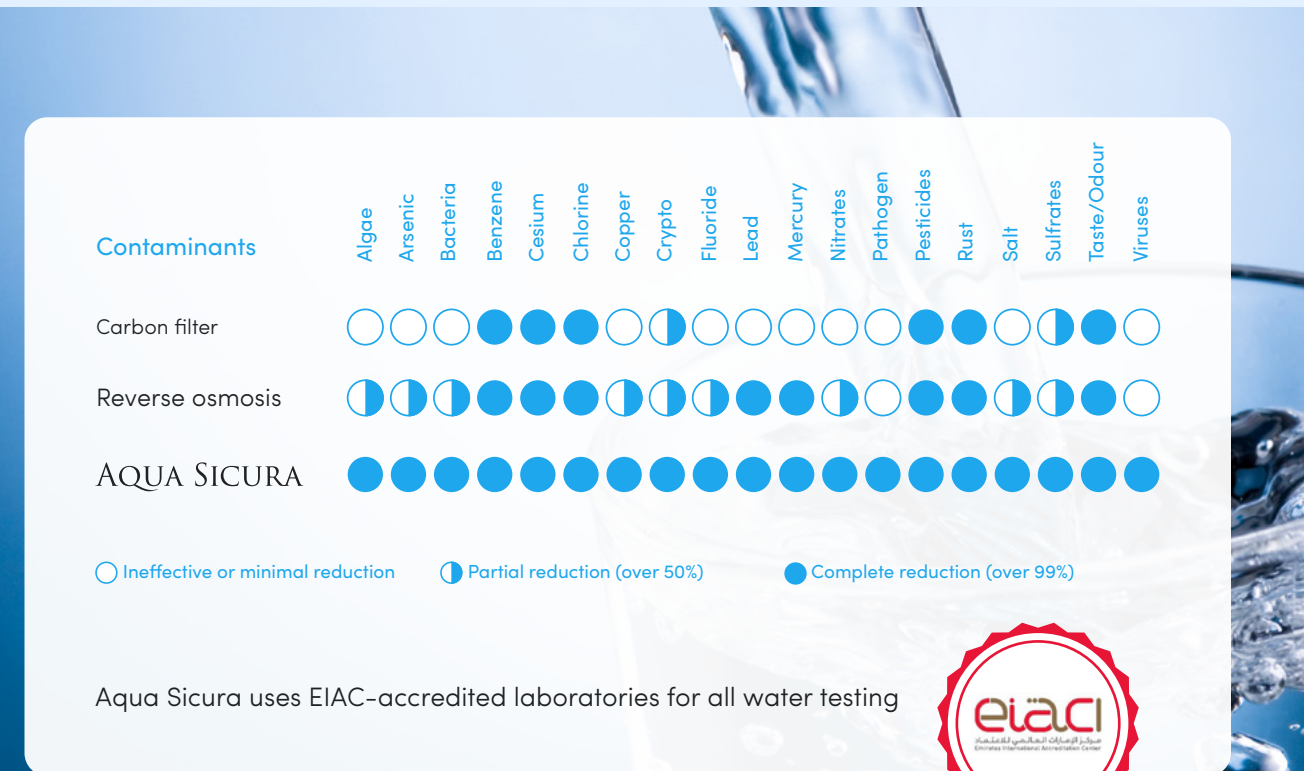

While chlorine is a tried and tested treatment for swimming pools, it's not for everyone. A hydrogen peroxide-based solution presents an effective alternative - particularly when it's augmented with UV or ozone technology to create crystal clear water that is soft and pleasant to swim in.

Enhancing bathing with natural minerals

Aqua Sicura is an expert at enhancing bathing experiences with peroxide and saltwater pool technologies. By harnessing the power of magnesium, potassium and iodine, we enable the therapeutic effects of thermal spring water without the usual odours. These minerals are absorbed through the skin via osmosis, offering a range of potential health benefits to support better sleep, heart health, the immune system - and reduce stress.

A natural solution to pool hygiene

Another powerful approach is saltwater chlorination which, when combined with our seamless filters, yields astonishing results. Low maintenance and naturally effective, salt water chlorinators use electrolysis to convert salt into a gentle form of chlorine, providing effective sanitation that is soft on the skin and eyes. This also eliminates the need for frequent manual chlorine dosing.

Aqua Sicura combines activation with wider water treatment techniques to reduce scale build-up, prevent bacteria and enhance overall water quality and system efficiency.

While activated carbon filters remove chlorine they are the primary cause of skin irritation and hair loss.
